

Bibliographic and Citation Technique

A bibliography is a purposely compiled descriptive list of records that serves as the main section or practice of reference and information access tools. It is very commonly used since it encompasses the entire field of study pertaining to books or physical object, including their evolution over time.

Concept of bibliography

A bibliography refers to a list of all information sources and materials such as books, periodical articles, monographs, website and web content. It is arranged in a logical sequence which have some relationship with each other. A bibliography includes the name of author, title of the work, name and location of the place of publication, date of publication and page number of the sources. It is a list of information material and sources that include different content such as text, music, audio files, video files, audiovisual files and other forms of information.

Branches of bibliography

Bibliography is a two-fold scholarly subject which includes enumerative and descriptive bibliography. Enumerative bibliography is a practice that classify books in specific collections or libraries in a particular subject by an author, printer or period of production. Descriptive bibliography is the logical description of a book or a tangible object.

Bibliographic Citation

A bibliographic citation includes a brief overview of the source on content as well as pertinent details about the authors and publication. The goal of a citation is to give the reader enough bibliographic detail so they can recognize and if necessary find and retrieve the original source. Citation and references can be used to acknowledge the work of others and demonstrate how their ideas have positively influence the research.

Component of a bibliography entry

- 1) Author or editors:
- 2) Title statement of the source
- 3) Publication distribution: where the book is published i.e. the city, date, pages and place of publication
- 4) Access date.

Function and use of bibliographic citation

- 1) It is a systematic guide to the literature of any subject.
- 2) It locates a title on any given subject and identifies the bibliographic details.
- 3) It serves as a resource development tool in acquiring materials for the library.
- 4) It aids in finding information on complete works.
- 5) It also save time and effort of researcher.
- 6) It provides direction to researcher.
- 7) It is useful for carrying out retrospective search for the purpose of research.
- 8) It encourages application of existing knowledge.
- 9) It assists librarians to be selective.

Other Branches of bibliography

- 1) Analytical or critical bibliography
- 2) Systematic or enumerative bibliography
- 3) Descriptive bibliography
- 4) Historical bibliography
- 5) Textual bibliography.

1) Analytical bibliography: It focuses on the analysis and the in-depth analysis of documents. It looks at the physical properties of papers as well as their physical history. It focuses on seamless delivery of works throughout the entire production.

2) Systematic bibliography: This type of bibliography focuses on the listing and categorization of books. It handles grouping bibliographical entries in an orderly manner or structure.

3) Descriptive bibliography: It is a bibliography that details the physical characteristics of the book including the author's full name, the precise title of the work, the date and location of publication.

4) Historical bibliography: It focuses on the history of book publication. This type of bibliography discusses the evolution of writing, printing and binding.

5) Textual bibliography: These are those used to evaluate how the writing or printing processes affected the text validity.

Types of bibliography

1) General bibliography

2) Special bibliography.

1) General bibliography: These are comprehensive in coverage of all subject areas. This comprises universal bibliography, language bibliography, national bibliography and regional bibliography.

2) Special bibliography: This focuses on limited subject areas. This consists of subject bibliography.

(i) Author and bio bibliography (ii) Bibliography of forms of literature (iii) Bibliography of materials of particular period (iv) Bibliographies of specific type of materials.

Annotated bibliographies

Annotated bibliography is a bibliography where summary are provided for each of the entries. It can also be a list of citation to books, papers, document and other publication. It is a typically 150-200 word in paragraph.
